Disruptors: Trends and Technologies

BUILDING EFFECTIVE CYBER SECURITY SYSTEMS

With high-profile cases of attacks and numerous examples of theft of sensitive corporate and personal data, cyber-security is becoming a top priority for both governments and boardrooms. What is the appropriate balance between public sector preventative measures and private sector responsibilities to invest in enhanced protection? What cyber-security strategies - both at the national and corporate levels - are proving most effective? And can these measures be replicated across borders and to multiple corporations?

Moderator

Sergei Plugotarenko, Director, The Russian Association for Electronic Communications (RAEC)

Panelists
